Good morning everyone,

You are invited to join us at 11am for the Keynote:

"Quantum Computing for Sustainable Development"

by Prof Francesco Petruccione

* Please note this talk will be available for viewing afterwards as well.

Abstract:
The idea of Quantum Computing was proposed about 40 years ago by Richard Feynman. Today, Noisy Intermediate-Scale Quantum Computer are freely available in the cloud. The talk focuses on the state of play of Quantum Computing in the South African and African landscape for academia and industry. Some potential applications will be presented ranging from quantum machine learning to finance
