ONLINE SHORT COURSE

Introduction to GitHub: From Basics to Advanced

Thursday, 13 June 2024, 17h00-19h00 SAST

--- Attend this course to earn CPD points through SACNASP ---

COURSE DESCRIPTION

This comprehensive course is designed to take your GitHub skills to the next level. Whether you're a beginner or have some GitHub experience, you stand to benefit from the presenter's unique insights into the practical applications of GitHub.

This course will cover:

- Fundamental GitHub concepts: Get a strong foundation in the essentials of version control and project management.
- Collaboration and teamwork: Learn best practices for working effectively with others on GitHub.
- Advanced techniques: Explore powerful features for professional workflows.
- Real-world applications: Discover how GitHub is used for product development in various industries.
- Integrating with data science tools: Learn how to streamline your data science projects with GitHub.
- Strategic project management: Sharing some tips on experience leading AI and data lakehouse teams at Old Mutual on managing complex projects with version control.

PRESENTER
